

Continuous Plastic Spacer (Zig Zag)

Description

The Zig Zag spacer is a versatile spacer with a high load-bearing capacity, designed for use when supporting reinforcement bar and mesh components. When used correctly, the Zig Zag spacer ensures a safe distance between the reinforcement & formwork and safeguards the specified concrete cover.

The offset triangular shape of the Zig Zag spacers unique design does not allow it to overturn easily, this positional stability benefits the user during the laying of the reinforcement, the closing of the formwork and concreting.
