

Steelfix Tying Wire System

Description

Steelfix is a refillable tying wire delivery system used by steel fixers when tying reinforcement in concrete structures. The system is worn on a belt and comprises of a dispensing reel which houses a 2kg spool of tying wire.

The wire is drawn through one of two openings on the side designed to accommodate right or left handed operatives. Any excess wire drawn while tying can easily be rewound into the reel where it remains clean, dry and ready until required again.
