

Movement ties

This range of ties allow masonry walls to be tied back to other structures (steelwork or masonry) providing restraint in one direction but allowing movement in the other. This is achieved by placing a debonding sleeve over the part of the tie which is to be embedded in the wall allowing the tie to move within the sleeve. These ties are also used in movement joints where they occur in long runs of brickwork. The ties span over a vertical joint preventing vertical movement but allowing horizontal expansion and contraction.

Product

V7PE Plain End Frame Cramp

Used for restraining masonry to steelwork whilst allowing lateral movement.

(Sleeve supplied as extra)

Sizes:

75mm	200mm
100mm	225mm
125mm	250mm
150mm	275mm
175mm	300mm

Performance

V7PE 75mm-300mm	
Shear Load Capacity	1180N
Minimum Mortar Joint	10mm
