

## Peep Vent

### Description

The Peep Vents functionally provides cavity wall drainage with an inconspicuous "peep" profile on the brick wall face. The design features ribbing to act as a mortar key for secure flooring, and a small angled exit hole to facilitate water drainage whilst guarding against penetration of insects and wind driven rain.

### Fitting instructions

The Peep Vent is fitted in open perp joints and mortared in position leaving 10mm proud of the brick face. N.H.B.C guidelines and peep holes are recommended to be sited at every 450mm with at least two per opening above all windows and doors.
